

LeadCare II

Product
Benefits

LeadCare II
One visit,
one fingerstick,
results in
3 minutes.

RESULTS IN MINUTES, NOT DAYS.

Is LeadCare® II right for you?

One in four U.S. children lives in housing old enough for lead paint to be a concern.¹ If your practice cares for children under 6 years old, blood lead testing at the point of care enables you to detect harmful blood lead levels and take swift action in just one visit.

How can LeadCare II help your practice?

In addition to helping improve the health of your patients by quickly detecting elevated blood lead levels, LeadCare II offers important benefits to your practice.

Improve patient satisfaction

- Parents prefer fingerstick over venipuncture
- Parents appreciate immediate results
- Parents prefer one visit over multiple trips to office or lab

Improve efficiency

- No laboratory send-outs required
- No follow-up calls to laboratories for results
- No redraws for sample problems

Improve economics

- Reclaim revenue stream from hospital/reference laboratories and put it back into your practice
- Receive reimbursement for testing with CPT code 83655
- Eliminate costs associated with repeat visits

LeadCare II can add value to many types of practices. Are any of the following true of yours?

- Do your patients live in neighborhoods with homes built before 1978?
- Do you have more than five well child visits for 1 and 2 year olds each week?
- Do you see Medicaid patients?
- Do you send out at least five lead tests per week?
- Do you test for hemoglobin/anemia at the point of care?
- Is your practice CLIA-waived (or higher)?

If you answered “yes” to just ONE of the above questions, then LeadCare II could be a valuable tool for your practice.
